

Atemis launches its Business Management Portal on EnterpriseIT2011 in Singapore

April 29, 2011. On EnterpriseIT 2011 in Singapore, Atemis will launch its new Management portal 100% cloud to the Asian market. This Atemis Portal gathers all business cloud apps to manage fully a company.

No more need for separate applications, one for CRM, a different one for HR, and yet another for Finance. This management portal is a fully integrated cloud solution where all modules and features are simply interconnected.

6 branches (CRM, Marketing, Administration, Projects, Finance and RH) with 54 modules and 405 features cover all the needs of every business, corporation and government.

For 11 years Atemis has been providing 100% web business applications that cover all activities and processes for more than 460 companies such as KPMG, Renault, Generali, Bosch, SygmaBank,...

Thanks to these experiences, to its strategy focused on customization and to important R&D investments, Atemis portal is now fully adaptable to reply all business needs. 1 to 1: One unique portal for one unique company. Then the application adapts to the company, not the other way round as with the other ERP / CRM providers.

The end user can select by himself the module to plug in, the menu to display, the tabs to see, the menus to access to for all the employees or partners in a really free and efficient manner.

Atemis aims in Singapore to fulfill the needs for cutting edge and cloud solutions, to contribute to the local market growth and to recruit local partners in all Asian countries.
